**9709/72**

Paper 7 Probability & Statistics 2 (S2)

**February/March 2018**

**1 hour 15 minutes**

Candidates answer on the Question Paper.

Additional Materials: List of Formulae (MF9)

**READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

**DO NOT WRITE IN ANY BARCODES.**

Answer **all** the questions in the space provided. If additional space is required, you should use the lined page at the end of this booklet. The question number(s) must be clearly shown.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

The use of an electronic calculator is expected, where appropriate.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

The total number of marks for this paper is 50.

This document consists of **13** printed pages and **3** blank pages.

**BLANK PAGE**

- 2 The number of phone calls arriving in a 10-minute period at a switchboard is modelled by the random variable  $X$  which has the distribution  $Po(4.1)$ . Use an approximating distribution to find the probability that more than 90 calls arrive in a 4-hour period. [5]

3 The heights of plants of type *A* have mean 1.2 m and standard deviation 0.03 m. A random sample of 5 plants of type *A* is selected. The sum of the heights of these 5 plants is denoted by  $H_A$  m.

(i) Find the mean and variance of  $H_A$ . [3]

The heights of plants of type *B* have mean 0.6 m and standard deviation 0.02 m. A random sample of 5 plants of type *B* is selected. The sum of the heights of these 5 plants is denoted by  $H_B$  m.

(ii) Find the mean and variance of  $H_A - 2H_B$ . [4]

5 Packets of Frugums contain 30 sweets. The manufacturer claims that, on average, 17% of the sweets are orange flavoured. Angela suspects that the average is actually less than 17%. In order to test the manufacturer's claim, she buys a packet of Frugums. If there are fewer than 3 orange flavoured sweets in the packet, she will conclude that the claim is false.

(i) State appropriate null and alternative hypotheses. [1]

.....  
.....  
.....

(ii) Explain what is meant by a Type I error in this situation. [1]

.....  
.....  
.....  
.....

(iii) Calculate the probability of a Type I error. [3]

6 A random variable  $X$  has probability density function given by

$$f(x) = \begin{cases} 6x(1-x) & 0 \leq x \leq 1, \\ 0 & \text{otherwise.} \end{cases}$$

(i) Find the probability that  $X$  does not lie between 0.3 and 0.7. [4]

.....  
.....  
.....  
.....

(iii) The manufacturer claims that the mean mass of sugar in bars of this type is 11.7 g. Explain why your answer to part (i) does not support this claim. [1]

.....  
.....  
.....

(iv) The manufacturer suggests that a 95% confidence interval would be more likely to support his claim than a 99% confidence interval. **Without doing a calculation**, explain whether this suggestion is correct. [1]

.....  
.....  
.....

(v) It is thought that the value of 0.01 for the population variance may not be correct. Use the values in the sample to calculate an unbiased estimate of the population variance. [3]
