Paper 2 Problem-solving and Programming

October/November 2022

MARK SCHEME

Maximum Mark: 50

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2022 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of **15** printed pages.

PUBLISHED**Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Please note the following further points:

The words in **bold** in the mark scheme are important text that needs to be present, or some notion of it needs to be present. It does not have to be the exact word, but something close to the meaning.

If a word is underlined, this **exact** word must be present.

A single forward slash means this is an alternative word. A double forward slash means that this is an alternative mark point.

Ellipsis (...) on the end of one-mark point and the start of the next means that the candidate **cannot** get the second mark point without being awarded the first one. If a mark point has an ellipsis at the beginning, but there is no ellipsis on the mark point before it, then this is just a follow-on sentence and **can** be awarded **without** the previous mark point.

Question	Answer	Marks
Section A		
1(a)(i)	<p>Many correct answers, the name used must be meaningful. The name given is an example only.</p> <p>One mark per mark point, max two</p> <ul style="list-style-type: none"> • Constant <code>NumberDays</code> ... • Value <code>... 14</code> <p>Task 1 – setting up the booking system</p> <p>Set up suitable data structures to store the car licence numbers and names of visitors who have booked car parking spaces. The data structures should have sufficient capacity to store data for each of the 20 parking spaces for a static period of two weeks. Allow a visitor to request a parking space on any day within the two-week period by entering a number between 1 and 14, inclusive. The system will check that there are spaces available on the day requested, and if so, will ask the visitor to enter their name and car licence number. This data will be stored in the data structures representing the first available parking space for the day requested. The visitor will be told the number of their parking space.</p> <p>At the end of the two-week period, allow all of the data to be deleted ready for the next two-week period.</p>	2
1(a)(ii)	<p>Many correct answers, the name used must be meaningful. The name given is an example only.</p> <p>One mark per mark point, max two</p> <ul style="list-style-type: none"> • Array <code>LicenceNumbers</code> ... • Use <code>... storing the licence numbers of the cars to be parked</code> 	2

Question	Answer	Marks
1(b)	<p>One mark per mark point, max two</p> <p>MP1 use a (range) check to check for values between 1 and 14 MP2 use a (type) check to ensure an integer is entered MP3 ... using an (appropriate) IF/conditional statement MP4 outputs an error message if a new input is required MP5 re-enter data using WHILE/REPEAT loop until a valid entry has been made</p> <p>One mark MP6 appropriate line of code / construct to answer the question</p> <p>Example code INPUT Day WHILE Day < 1 OR Day > 14 DO OUTPUT "You must enter a number between 1 and 14 inclusive" INPUT Day ENDWHILE</p>	3

Question	Answer	Marks
1(c)	<p>One mark per mark point, max six</p> <p>MP1 input for day number or to choose accessible parking ... MP2 ... both inputs with appropriate prompts MP3 conditional statement to check if accessible parking is required MP4 initialisation of variable for the first accessible space MP5 checking if current array element is an available space MP6 correct loop to check all array elements for the day MP7 ... until an available space is found (or not) MP8 input car licence number and name (with or without prompts) MP9 ... and store them in the correct array position(s) MP10 appropriate output for space available or no space available MP11 appropriate output for allocated parking space details</p> <p>Task 2 – adding accessible parking spaces The visitor car park booking system is to be re-designed to offer accessible parking. Spaces 1 to 5 are named accessible spaces. Spaces 6 to 20 are named general spaces.</p> <p>Extend your program in Task 1 so that:</p> <ul style="list-style-type: none"> • when a visitor requests a parking space, they are additionally asked if they need an accessible space <ul style="list-style-type: none"> – if so, they are allocated the first available space beginning at space 1 and finishing at space 20 – if not, they are allocated the first available space beginning at space 20 and finishing at space 6. <p>The system must work so that visitors requiring accessible parking may be allocated any of the 20 spaces, but visitors who do not need accessible parking may only be allocated general spaces.</p>	6

Question	Answer	Marks
1(c)	<p>Example answer</p> <pre>//Assume LicenceNumber array has been initialised with the null string OUTPUT "Enter the number of the day in which you require parking " INPUT Day OUTPUT "Do you require an accessible space? (Y or N)" INPUT Accessible IF Accessible = "Y" THEN SpaceAllocated ← FALSE Space ← (Day - 1) * 20 REPEAT IF LicenceNumbers[Space] = "" THEN OUTPUT "Enter your car licence number " INPUT LicenceNumbers[Space] SpaceAllocated ← TRUE ENDIF Space ← Space + 1 UNTIL SpaceAllocated OR Space = (Day - 1) * 20 + 20 IF NOT SpaceAllocated THEN OUTPUT "No space available" ELSE OUTPUT "You are allocated space: ", Space - (Day - 1) * 20 ENDIF ENDIF ENDIF</pre>	

Question	Answer	Marks
1(d)	<p>Explanation of how the following could be done:</p> <p>One mark per mark point, max three</p> <p>MP1 change the max constant to 560 / 28 MP2 change the output message for the user to say that the range of days entered must be from 1 to 28 MP3 alter the validation to allow an input of 1 to 28 MP4 change the size of the array that stores licence numbers / names so that it can hold the additional data MP5 ensure that all loops that access the stored data for retrieval or erasing of data include the new full range</p>	3
1(e)	<p>Explanation of how the following could be done:</p> <p>One mark per mark point, max four</p> <p>MP1 initialise counting variable(s) ... MP2 ... for accessible spaces and general spaces before any spaces have been allocated MP3 increment the counter(s) ... MP4 ... for accessible spaces and general spaces MP5 maintain both counters for the full two-week cycle MP6 output to show the total number of accessible and general spaces allocated so far, with suitable messages</p> <ul style="list-style-type: none"> • Task 3 – working out car park usage statistics • Extend the program to enable the following statistics to be counted and output on request: • The number of accessible spaces used on any of the 14 days. • The number of general spaces used on any of the 14 days. • The total number of spaces used on any of the 14 days. • The number of accessible spaces used in the whole 14-day period. • The number of general spaces used in the whole 14-day period. • The total number of spaces used in the whole 14-day period. 	4
