Paper 6 Alternative to Practical

October/November 2023

MARK SCHEME

Maximum Mark: 60

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2023 series for most Cambridge IGCSE, Cambridge International A and AS Level components, and some Cambridge O Level components.

This document consists of **10** printed pages.

PUBLISHED**Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Science-Specific Marking Principles

1 Examiners should consider the context and scientific use of any keywords when awarding marks. Although keywords may be present, marks should not be awarded if the keywords are used incorrectly.

2 The examiner should not choose between contradictory statements given in the same question part, and credit should not be awarded for any correct statement that is contradicted within the same question part. Wrong science that is irrelevant to the question should be ignored.

3 Although spellings do not have to be correct, spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. ethane / ethene, glucagon / glycogen, refraction / reflection).

4 The error carried forward (ecf) principle should be applied, where appropriate. If an incorrect answer is subsequently used in a scientifically correct way, the candidate should be awarded these subsequent marking points. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

5 'List rule' guidance

For questions that require *n* responses (e.g. State **two** reasons ...):

- The response should be read as continuous prose, even when numbered answer spaces are provided.
- Any response marked *ignore* in the mark scheme should not count towards *n*.
- Incorrect responses should not be awarded credit but will still count towards *n*.
- Read the entire response to check for any responses that contradict those that would otherwise be credited. Credit should **not** be awarded for any responses that are contradicted within the rest of the response. Where two responses contradict one another, this should be treated as a single incorrect response.
- Non-contradictory responses after the first *n* responses may be ignored even if they include incorrect science.

6 Calculation specific guidance

Correct answers to calculations should be given full credit even if there is no working or incorrect working, **unless** the question states 'show your working'.

For questions in which the number of significant figures required is not stated, credit should be awarded for correct answers when rounded by the examiner to the number of significant figures given in the mark scheme. This may not apply to measured values.

For answers given in standard form (e.g. $a \times 10^n$) in which the convention of restricting the value of the coefficient (a) to a value between 1 and 10 is not followed, credit may still be awarded if the answer can be converted to the answer given in the mark scheme.

Unless a separate mark is given for a unit, a missing or incorrect unit will normally mean that the final calculation mark is not awarded. Exceptions to this general principle will be noted in the mark scheme.

7 Guidance for chemical equations

Multiples / fractions of coefficients used in chemical equations are acceptable unless stated otherwise in the mark scheme.

State symbols given in an equation should be ignored unless asked for in the question or stated otherwise in the mark scheme.

Question	Answer	Marks
1(a)(i)	5 and 8 ;	1
1(a)(ii)	1 / 2 and 6 / 7 ;	1
1(b)	axes labelled and scale linear and bars height cover \geq half the grid ; bars correct heights ; bars separated and bars same width ;	3
1(c)(i)	damp and dark ;	1
1(c)(ii)	prevents bias ;	1
1(c)(iii)	the two results are very different ;	1

Question	Answer	Marks
2(a)(i)	5.2 ; 10.5 ;	2
2(a)(ii)	5.3 ;	1
2(a)(iii)	0.265 ; cm / min ;	2
2(b)	water molecules moves into sugar solution / bag ; sugar molecules cannot move out / through ; more molecules going in than going out ;	3
2(c)	no change / water in tube level with water in the beaker and same number of water molecules move in and out ;	1
2(d)(i)	Benedict's ;	1
2(d)(ii)	green / yellow / orange / red ; blue;	2

Question	Answer	Marks
3(a)(i)	highest temperature / all water at same temperature ;	1
3(a)(ii)	add a lid ; less gap between flame and beaker / draught shield / reflective shield ;	2
3(b)(i)	20.0 ; 37.5 ;	2
3(b)(ii)	17.5 ;	1
3(c)(i)	26.86 ; 26.64 ;	2
3(c)(ii)	0.22 ; 0.0037 ;	2
3(d)	1984 ;	1
3(e)(i)	pentanol / 2150 and too much water in beaker / didn't weigh the spirit burner immediately / didn't leave the thermometer in the water / doesn't stir / incomplete combustion ;	1
3(e)(ii)	as number of carbon atoms (in the alcohol molecule) increases the (thermal) energy given out (as the alcohol burns) increases ;	1

Question	Answer	Marks
4	<p><i>one mark from each section and any two other marks</i></p> <p>apparatus container for acid and solid airtight with delivery of gas to detergent in a container ; balance if used to find mass of sodium carbonate ; ruler if used to measure the height of the foam / foam and solution ;</p> <p>method repeat each mass ; at least 5 different masses ; goggles to protect eyes from acid / detergent / foam / gloves to protect hands / skin from acid ;</p> <p>measurements mass of carbonate solid ; height of foam ;</p> <p>variables controlled volume / concentration / amount of acid ; temperature ; volume / concentration / amount of detergent ;</p> <p>processing and conclusion repeats are to exclude anomalies (before averaging) / average to exclude anomalies ; (only if each mass is repeated) plot graph of foam height against mass carbonate ; when the mass increases does the height of the foam increase, decrease, or stay the same / graph shape explained e.g. if straight line through origin is proportional etc ;</p>	7

Question	Answer	Marks
5(a)(i)	3.9 (cm) ;	1
5(a)(ii)	19.5 (cm) ;	1
5(a)(iii)	60.5 (cm) ;	1
5(a)(iv)	14.746875 (cm) ; 14.7 ;	2
5(b)(i)	20.2 (cm) ;	1
5(b)(ii)	15.1 ;	1
5(c)	14.9 ;	1
5(d)	move the lens slowly / move forwards and backwards until sharpest focus is obtained / carry out away from other bright light sources ;	1
5(e)	image (a) drawn inverted and magnified ; image (b) drawn inverted and diminished ;	2

Question	Answer	Marks
6(a)	correct voltmeter symbol ; correct parallel connection ;	2
6(b)	1.9 ; 0.26 ;	2
6(c)	7.3 ;	1
6(d)	8.6 and 8.3 ;	1
6(e)	10% calculation using a value from (d) ; comparison with the other value and statement to match ;	2
6(f)	reduce the current / open switch between readings ;	1
