Paper 2

October/November 2017

2 hours 15 minutes

Candidates answer on the Question Paper.

Additional Materials: Ruler
 Calculator
 Protractor
 Plain paper

1:50 000 Survey Map Extract is enclosed with this question paper.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces provided.
Write in dark blue or black pen.
You may use an HB pencil for any diagrams or graphs.
Do not use staples, paper clips, glue or correction fluid.
DO NOT WRITE IN ANY BARCODES.

Write your answer to each question in the space provided. If additional space is required, you should use the lined pages at the end of this booklet. The question number(s) must be clearly shown.

Section A

Answer **all** questions.

Section B

Answer **one** question.

The Insert contains Photograph A for Question 3 and Figs. 8, 9 and 13 and Tables 1, 2 and 3 for Question 7, and Figs. 15 and 16 and Tables 4 and 5 for Question 8.

The Survey Map Extract and the Insert are **not** required by the Examiner.

Sketch maps and diagrams should be drawn whenever they serve to illustrate an answer.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of **31** printed pages, **1** blank page and **1** Insert.

Section A

Answer **all** questions in this section.

1 Study the 1:50 000 map of Castletown, Isle of Man.

(a) (i) Measure the length of the Isle of Man Steam Railway from the station at Port Erin (197689) to the station at Castletown (267680). Give your answer to the nearest kilometre.

.....[1]

(ii) How many stations are **between** these two points?

.....[1]

(iii) What has been done to keep the railway level?

.....[1]

(iv) What has been done so that the railway can cross these roads?

- A28

.....

- B45

.....[2]

(b) (i) Give the six-figure grid reference of the road junction of the A27 and the A36, in the north of the map.

.....[1]

(ii) Using map evidence, explain why this is a good location for a viewpoint.

.....

.....

.....

.....[2]

(c) A fort was located on South Barrule, in grid square 2575. Suggest why this would be a good defensive site.

.....

 [2]

(d) State **three** facilities for tourists at South Barrule Forest Park in grid square 2776.

.....

 [3]

(e) Fig. 1 shows the location of the Southern 100 Course, a road used as a racing route.

Fig. 1

Complete the description of the Southern 100 Course.

From Ballabeg (grid square 2570) follow the A7 towards ESE.

At the A3, turn to go

At the, turn to go WNW.

At the A28, turn to go to return to Ballabeg. [3]

2 Study Fig. 3 which shows the number of USA citizens living in five other countries, in 1990, 2000 and 2010.

Key

- C = Canada
- G = Germany
- M = Mexico
- PR = Puerto Rico
- UK = United Kingdom

Fig. 3

(a) (i) Complete Fig. 3 to show 160 000 USA citizens living in the UK in 2000. [1]

(ii) How many USA citizens were living in Germany in 1990?

.....[1]

(iii) For which country was there no change in the number of USA citizens between 2000 and 2010?

.....[1]

(iv) Which country showed a decrease in the number of USA citizens between 2000 and 2010?

.....[1]

(b) (i) For the 2010 data, rank the countries from highest to lowest number of USA citizens.

Highest

.....

.....

.....

Lowest

[1]

(ii) State **two** countries that have exchanged rank positions between 1990 and 2010.

.....[1]

(c) Compare the change in the number of USA citizens in Canada and Mexico between 1990 and 2010.

.....

.....

.....

.....[2]

[Total: 8 marks]

(b) (i) Fig. 4 shows a coastal area. Coastal protection has been used at **B** to prevent erosion.

Key

- ////// cliff
- settlement

Fig. 4

For each of **A** and **C**, suggest **one** reason why coastal protection was not thought to be necessary.

A

.....

C

.....[2]

(ii) Suggest a group of people who would be against the use of coastal protection at **B**. Give a reason for your answer.

Group

Reason

.....[1]

[Total: 8 marks]

4 Study Fig. 5 which shows climate data for two locations in West Africa.

Fig. 5

(a) Use the information in Fig. 5 to complete the table below.

	Tombouctou	Lagos
Highest temperature °C	40	
Lowest temperature °C	27	
Annual range °C	13	
Total days with rain		66
Month with rain on most days	June	

[5]

(b) (i) During which months would you expect to see the highest temperatures for places in the northern hemisphere?

.....[1]

(ii) Suggest **two** factors that would influence temperature in a desert.

.....

[2]

[Total: 8 marks]

5 Study Fig. 6, which shows New York's water supply system.

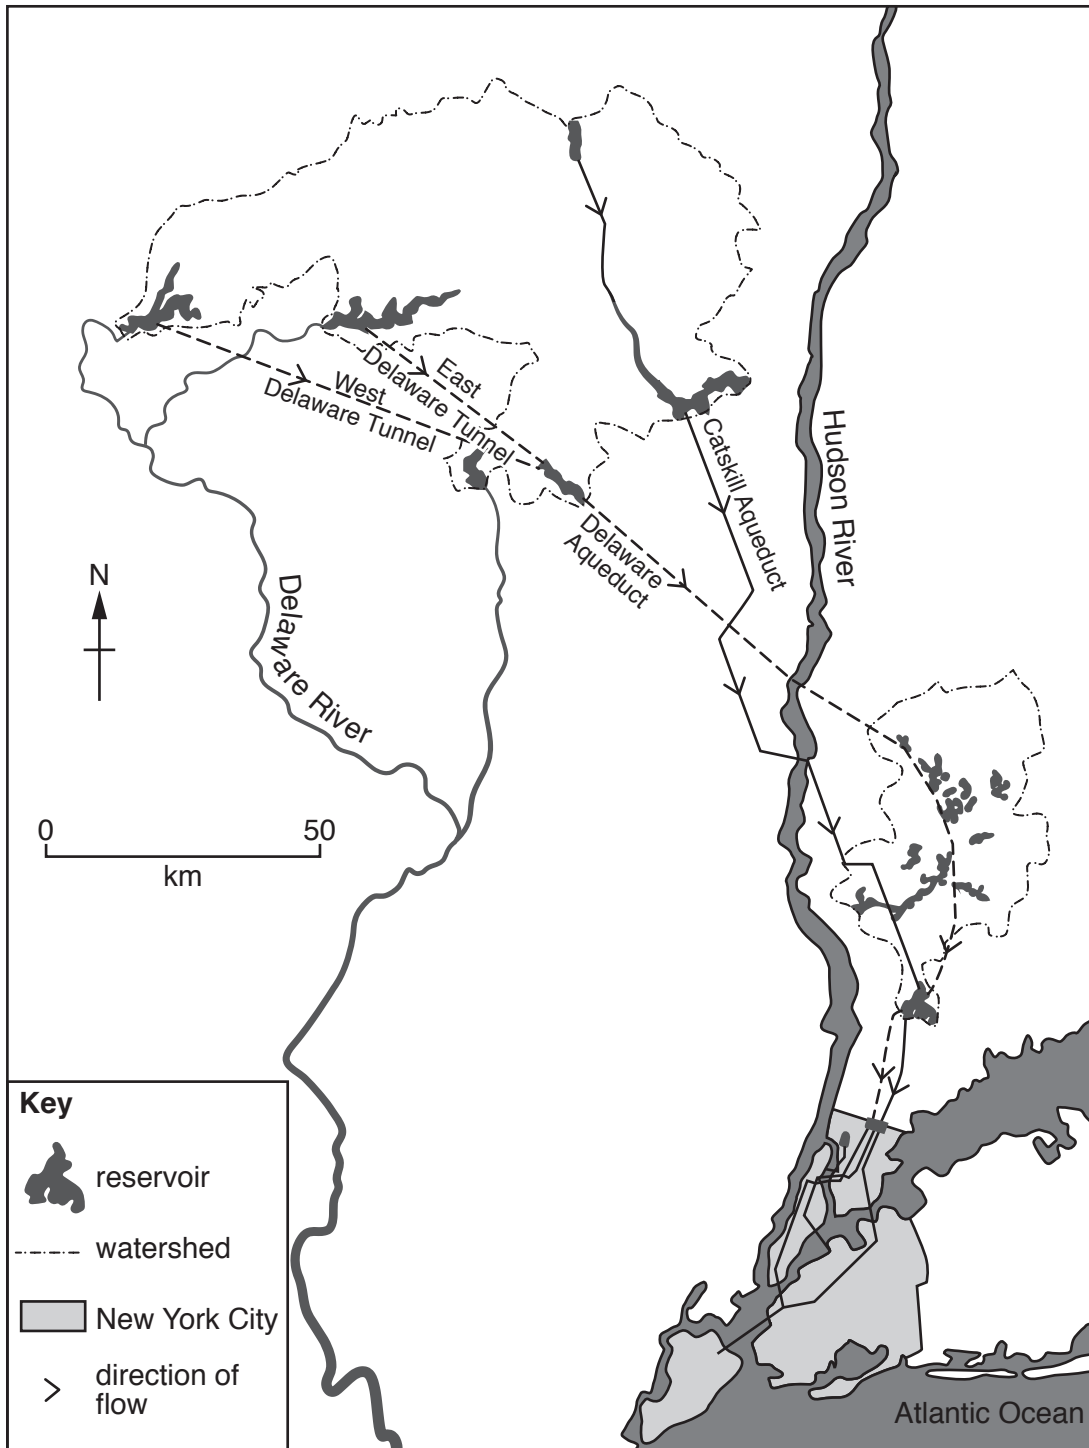

Fig. 6

(a) What is a watershed?

.....
.....[1]

(b) (i) Identify **two** methods used to transport water towards New York City.

.....
.....[2]

(ii) Identify **two** different types of named fresh water source shown on Fig. 6.

.....
.....[2]

(c) Describe the location of New York City in relation to its areas of water supply.

.....
.....
.....
.....[2]

(d) Suggest a source of river pollution that may prevent water supply being taken from the Hudson River.

.....
.....[1]

[Total: 8 marks]

6 Study Fig. 7, which shows percentage of energy production from renewable energy.

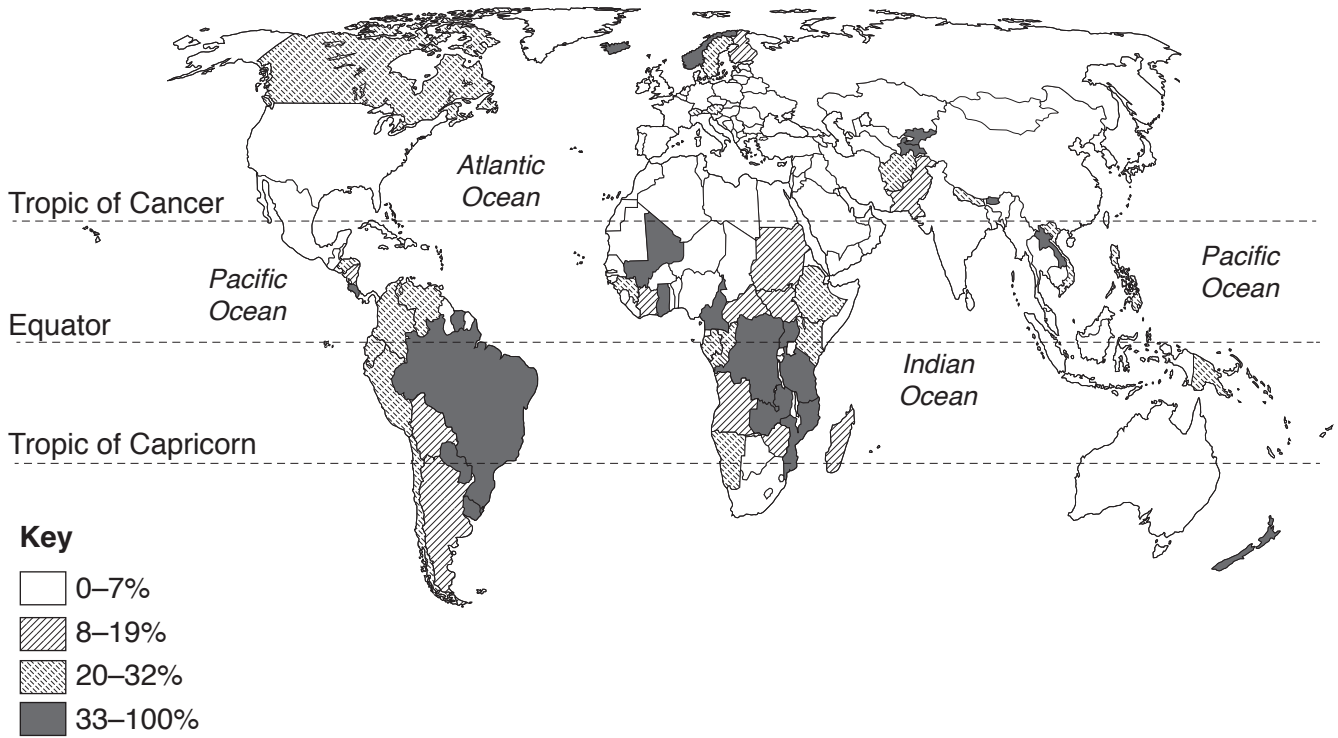

Fig. 7

(a) (i) What is renewable energy?

.....
.....[1]

(ii) Describe the distribution of areas that produce 33% or more of renewable energy.

.....
.....
.....
.....
.....
.....
.....
.....
.....
.....[4]

(b) Which type of renewable energy would be more readily available:

- at a plate boundary?

.....

- in a hot desert?

.....[2]

(c) What is meant by HEP?

.....[1]

[Total: 8 marks]

- (ii) The students recorded the water level in the tube every minute for 10 minutes or until there was no water left. The results of their measurements at sites 4 and 7 are shown in Table 1 (Insert).

Use these results to **complete the measurements** for site 4 in Fig. 10 below. [2]

Results of measurement of water height at two sites on transect A

Key

- x site 4
- site 7

Fig. 10

- (iii) The students then calculated the infiltration rate at each site. Their calculation for site 4 is shown below.

$$\begin{aligned} \text{Infiltration rate} &= \frac{\text{fall in water level (mm)}}{\text{time (min)}} \\ &= \frac{70}{10} \\ &= 7.0 \text{ mm per min} \end{aligned}$$

Use the data in Table 1 to show the calculation which produced the result for site 7 in the space below. [1]

$$\begin{aligned} \text{Infiltration rate} &= \frac{\text{fall in water level (mm)}}{\text{time (min)}} \\ &= \dots\dots\dots \\ &= 2.4 \text{ mm per min} \end{aligned}$$

- (iv) The measurements of distance from the river and infiltration rate at the different fieldwork sites on transect A are shown in Table 2 (Insert). The students plotted these results on a graph, Fig. 11 below. **Complete the graph** by plotting the result for site 7. [1]

Infiltration rate at the sites on transect A

Fig. 11

- (ii) The results for transects **A** and **B** are shown in Table 3 (Insert). Use this data to **plot the results** at site 3 on transect **B** in Fig. 14 below. [2]

Results of measurements of infiltration rate and soil moisture content

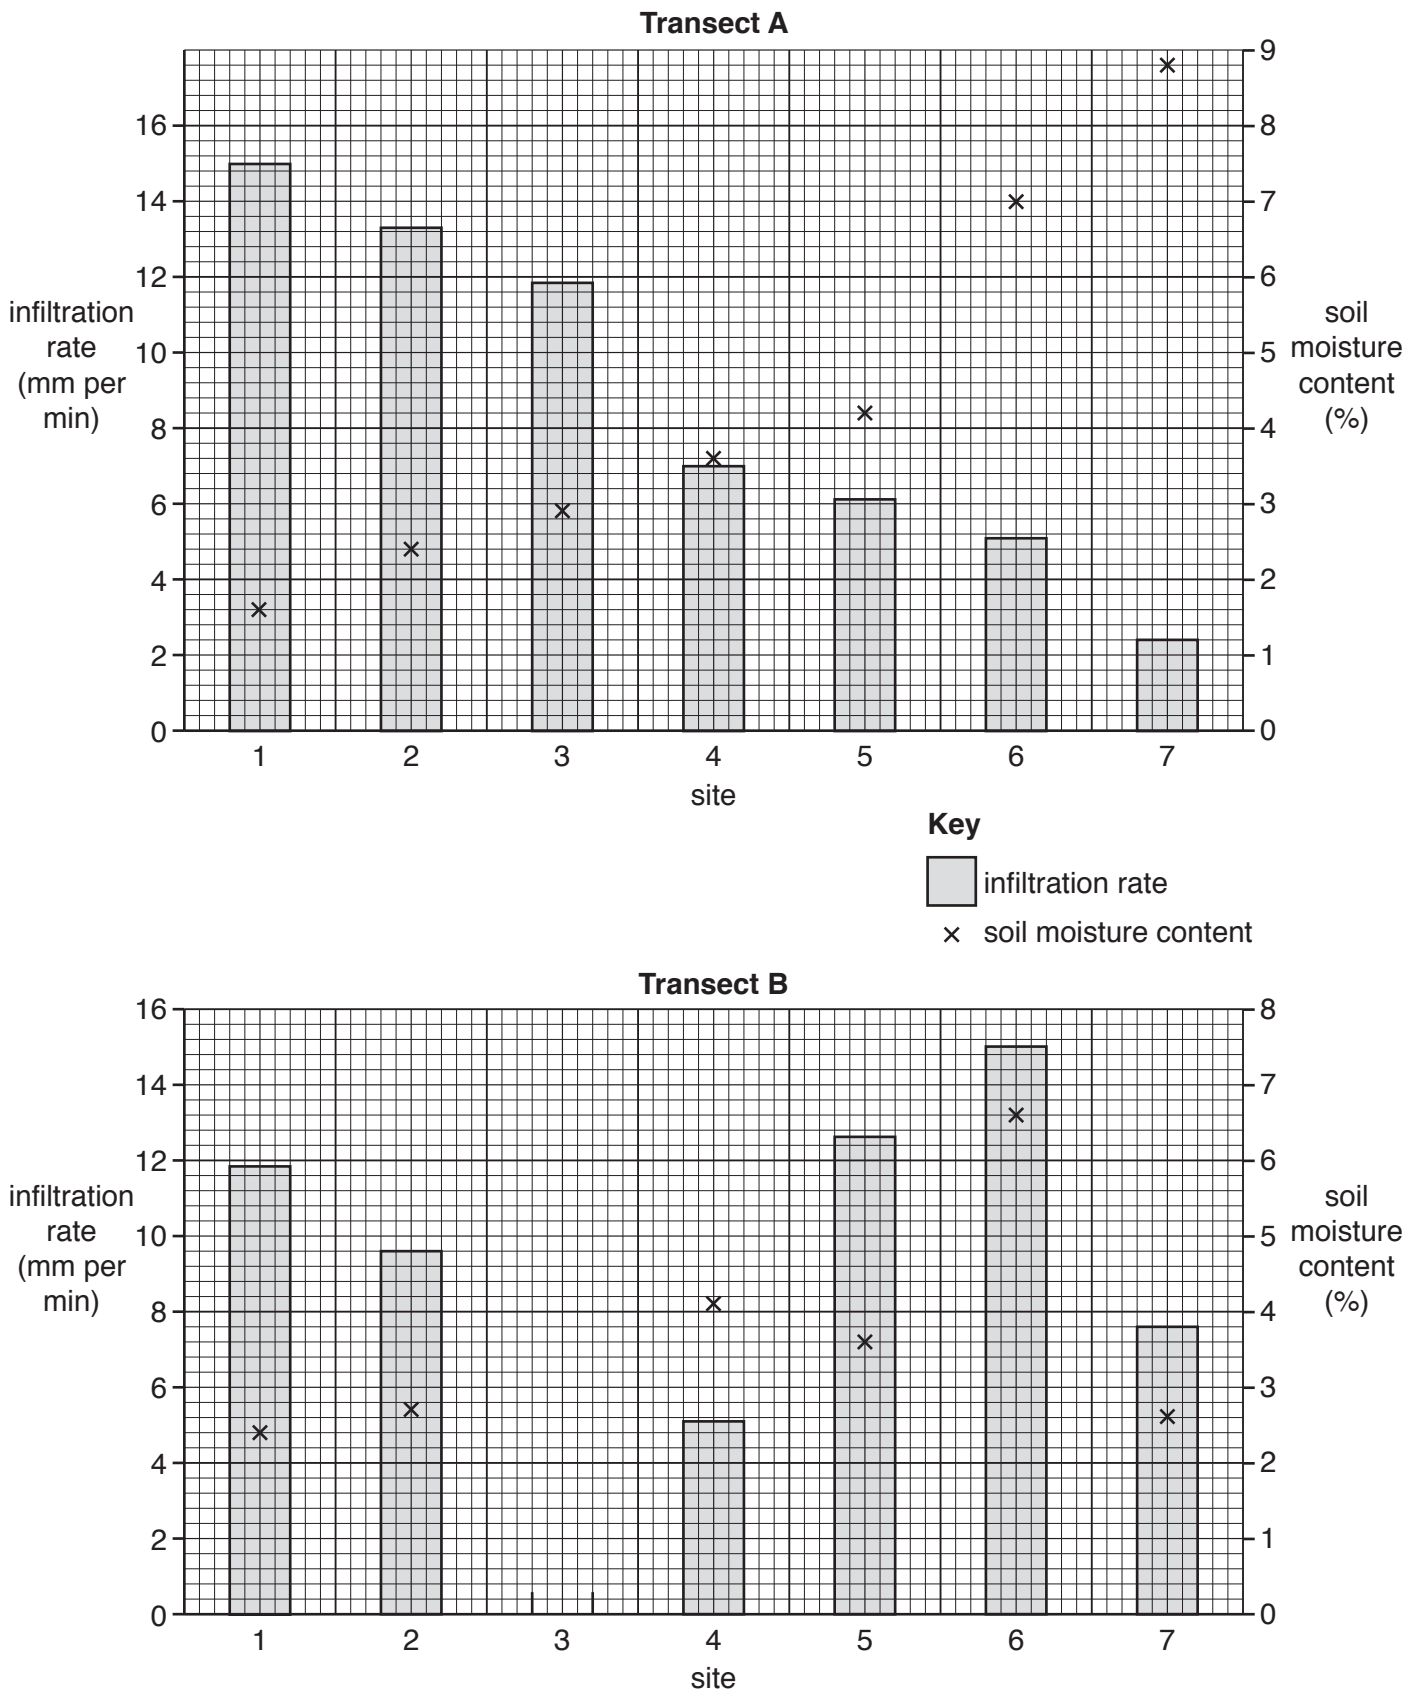

Fig. 14

- 8 Students in the UK wanted to investigate how areas of their city were different from each other. In particular they decided to find out about differences in the quality of the urban environment and access to local services.

The students selected six sites to do their fieldwork in different areas of the city. These are shown in Fig. 15 (Insert).

The students decided to test the following hypotheses:

Hypothesis 1: *The quality of the urban environment improves as distance from the city centre increases.*

Hypothesis 2: *Access to local services is better further away from the city centre.*

- (a) To investigate **Hypothesis 1** the students did an environmental quality survey at one site in each area of the city. Their recording sheet is shown in Fig. 16 (Insert).

- (i) Describe how the students would use the recording sheet.

.....
.....
.....
.....[2]

- (ii) Explain how an environmental quality survey should be organised and carried out to make sure that results are reliable.

.....
.....
.....
.....
.....
.....
.....
.....
.....[4]

(b) The results of the environmental quality survey are shown in Table 4 (Insert).

(i) Identify **one** difference in the quality of the urban environment between each of the following areas:

- Tettenhall and Pendeford

.....

.....

- Whitmore Reans and Low Hill

.....

..... [2]

(ii) Use the data in Table 4 to **complete the bi-polar graph** for Low Hill in Fig. 17 below. [1]

Bi-polar graph to show environmental quality scores in Low Hill

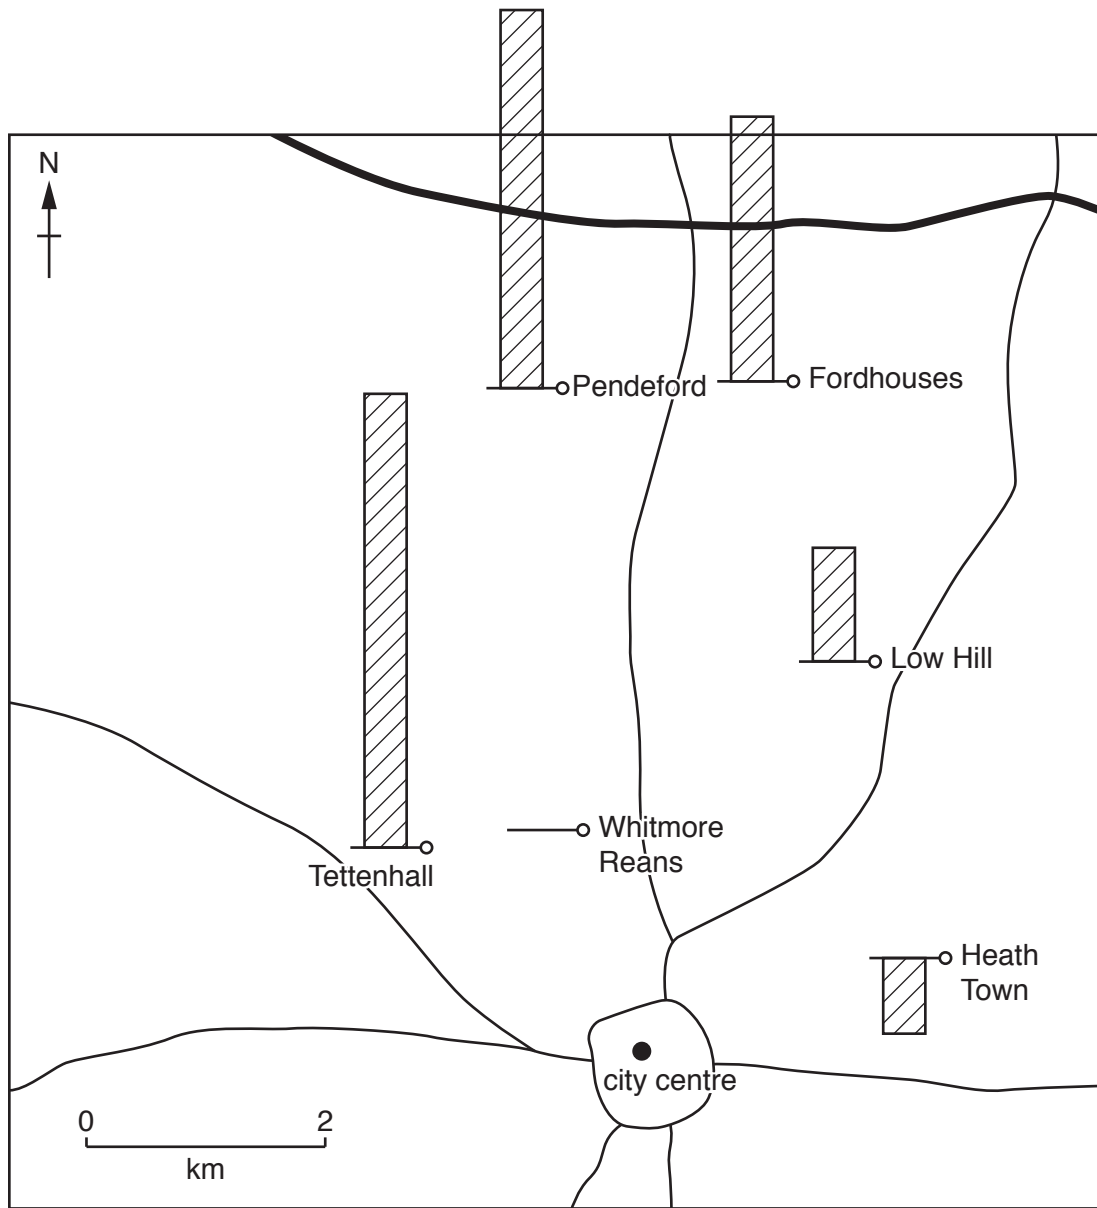

Fig. 17

- (iii) Using the data in Table 4 the students plotted the total environmental quality score for each area on Fig. 18 below. Use the scale to **plot the total environmental quality score** for Whitmore Reans on Fig. 18. [1]

Total environmental quality score for each area

environmental quality score scale

Fig. 18

- (iv) Which **one** of the following conclusions about **Hypothesis 1: *The quality of the urban environment improves as distance from the city centre increases*** is correct? Support your decision with evidence from Fig. 18 and Table 4.

Conclusion	Tick (✓)
Hypothesis 1 is true	
Hypothesis 1 is partly true	
Hypothesis 1 is false	

.....

.....

.....

.....

.....

.....

.....[4]

- (c) To investigate **Hypothesis 2: *Access to local services is better further away from the city centre***, the students asked residents in each area to tell them how much time they took to walk to different services.

The students used a random sampling method to select people to interview.

Describe this method and give **one** advantage of the method.

Description

.....

.....

Advantage

.....

.....[2]

(d) Fig. 19 below is an example of a partly completed survey sheet.

Survey sheet

Name of residential area: Pendeford

How many minutes does it take you to walk to the nearest service for each of the following?

Circle your answer

Park	less than 5	between 5 and 15	between 16 and 30	more than 30
Supermarket	less than 5	between 5 and 15	between 16 and 30	more than 30
Primary school	less than 5	between 5 and 15	between 16 and 30	more than 30
Secondary school	less than 5	between 5 and 15	between 16 and 30	more than 30
Doctors' surgery / Health centre	less than 5	between 5 and 15	between 16 and 30	more than 30
Bus stop	less than 5	between 5 and 15	between 16 and 30	more than 30
City centre shops	less than 5	between 5 and 15	between 16 and 30	more than 30
Local store	less than 5	between 5 and 15	between 16 and 30	more than 30

Fig. 19

(i) **Complete Fig. 19** using the following information.

- Time taken to walk to the nearest park: 7 minutes;
- Time taken to walk to the nearest secondary school: 40 minutes. [2]

(ii) Why might the question used in the survey (How many minutes does it take you to walk to the nearest service for each of the following?) result in an answer that is **not** useful?

.....

.....

.....

.....[2]

- (iii) When the students had completed the survey they produced a 'household convenience index' by giving a score to each answer circled on the survey sheet. The scoring system is shown below.

Time taken	Score
less than 5 minutes	4
between 5 minutes and 15 minutes	3
between 16 minutes and 30 minutes	2
more than 30 minutes	1

Use this scoring system **to complete Fig. 20**, below, which shows the household convenience index for one person's answers in Low Hill. Insert the score for the local store and the total index score. [2]

Household convenience index result in Low Hill

Name of residential area: Low Hill					
How many minutes does it take you to walk to the nearest service for each of the following?					
Circle your answer					Score
Park	less than 5	between 5 and 15	between 16 and 30	more than 30	4
Supermarket	less than 5	between 5 and 15	between 16 and 30	more than 30	3
Primary school	less than 5	between 5 and 15	between 16 and 30	more than 30	3
Secondary school	less than 5	between 5 and 15	between 16 and 30	more than 30	2
Doctors' surgery / Health centre	less than 5	between 5 and 15	between 16 and 30	more than 30	3
Bus stop	less than 5	between 5 and 15	between 16 and 30	more than 30	4
City centre shops	less than 5	between 5 and 15	between 16 and 30	more than 30	1
Local store	less than 5	between 5 and 15	between 16 and 30	more than 30	
Total household convenience index score					
Percentage household convenience score					75%

Fig. 20

(e) The students then calculated a percentage household convenience score for each area of the city. These results are shown in Table 5 (Insert).

(i) **Complete Fig. 21 below** by plotting the percentage household convenience score for Fordhouses. [1]

Household convenience score of each area

Fig. 21

(ii) What conclusions would the students make about **Hypothesis 2: Access to local services is better further away from the city centre?** Support your decision with evidence from Fig. 21 and Table 5.

.....
.....
.....
.....
.....
.....
.....[3]

(f) For extension work the students wanted to investigate how the amount of traffic might vary between different areas of the city. Describe a fieldwork method for this investigation.

.....
.....
.....
.....
.....
.....
.....
.....
.....
.....[4]

[Total: 30 marks]
