Paper 2 Theory

October/November 2023

1 hour 45 minutes

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

INFORMATION

- The total mark for this paper is 80.
- The number of marks for each question or part question is shown in brackets [].
- The Periodic Table is printed in the question paper.

1 A man throws a ball.

The ball follows the path shown in Fig. 1.1.

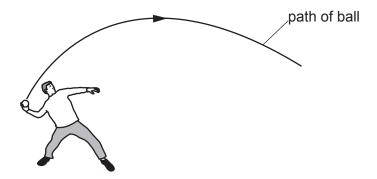

Fig. 1.1

(a)	The man wants to calculate the speed of the ball.
	Explain what is meant by the speed of the ball.
	[2]
(b)	The speed of the ball is as fast as a car.
	Suggest a suitable value for the speed of the ball and include the unit in your answer.
	value for anod — wit [11]
	value for speed = unit [1]
	[Total: 3]

2 (a) Table 2.1 contains names and functions of some cells found in blood.

Complete Table 2.1 by inserting the missing information.

Table 2.1

name of cell	function of cell
red blood cell	
lymphocyte	
	engulfs pathogens
	clots blood

[4]

(b) Fig. 2.1 shows the liver and its blood vessels.

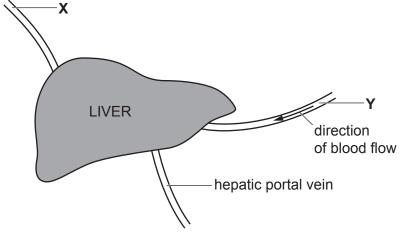

Fig. 2.1

(i)	State the	names of	the blood	vessels	labelled)	(and Y	on Fig.	2.1.
-----	-----------	----------	-----------	---------	------------	---------	---------	------

X	 	 • •	٠.	-	 	 -										-					-	
Υ	 	 			 																	

[2]

(ii) Draw arrows on blood vessel **X** and the hepatic portal vein in Fig. 2.1 to show the direction of blood flow. [1]

[Total: 7]

3	Methano	ol, CH ₃ OH, is produced in a reaction between carbon monoxide and hydrogen.
	The equ	ation for the reaction is:
		$CO + 2H_2 \rightarrow CH_3OH$
	[A _r : C, 1	2; H, 1; O, 16]
	(a) (i)	Calculate the relative molecular mass $M_{\rm r}$ of methanol.
		$M_{\rm r} =$ [1]
	(ii)	Complete the following sentences.
		g of carbon monoxide produces 160 g of methanol.
		g of hydrogen produces 6.4g of methanol. [2]
	(iii)	Describe the effect of a catalyst on the rate of formation of methanol.
	()	
	(iv)	Compare the mass of a catalyst at the beginning of the reaction with the mass of the
		catalyst at the end of the reaction.
	(b) (i)	Complete Fig. 3.1 to show the outer electrons in a molecule of hydrogen.
	(b) (i)	Complete Fig. 5.1 to show the outer electrons in a molecule of hydrogen.
		Н Н
		T i. 0.4
		Fig. 3.1 [1]
	(ii)	Explain why hydrogen is a poor conductor of electricity.

.....[1]

[Total: 7]

4 A wooden block is pulled along a bench.

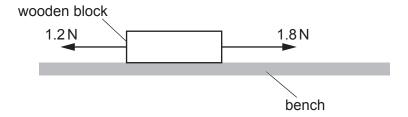

Fig. 4.1

The block moves towards the right.

The sizes and directions of the horizontal forces acting on the block when it is in motion are shown in Fig. 4.1.

(a)	The horizontal force of	1.2 N acts in the	opposite direction t	to the direction of	motion
(a)	THE HUHZUHIAI IUICE UI	1.2 IN acts III the	Opposite direction t	.0 1116 011 6011011 01	IIIOUIOII.

(1)	State the name of this force.	
		[1]
(ii)	Calculate the resultant force acting on the block.	

- (b) The wooden block has a mass of 2.0 kg.
 - (i) State the equation linking mass, force and acceleration.

 [1]
 - (ii) Using your answer in (a)(ii), calculate the acceleration of the block.

acceleration =
$$m/s^2$$
 [1]

[Total: 4]

5 (a) Fig. 5.1 shows a section through a leaf.

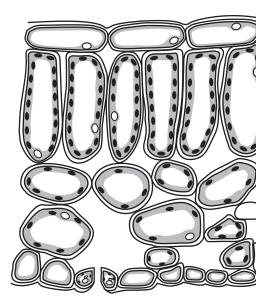

Fig. 5.1

	(1)	Draw a line to a cell in the palisade mesophyll on Fig. 5.1 and label it F.	נין
	(ii)	Draw a line to an air space on Fig. 5.1 and label it A .	[1]
(b)	(i)	Some cells in the leaf contain structures called chloroplasts.	
		Name one type of leaf cell where chloroplasts are found.	
			[1]
	(ii)	Chloroplasts contain chlorophyll.	
		Name the mineral ion that plants need to make chlorophyll.	
			[1]
(c)	Ехр	lain how the air spaces in a leaf enable it to carry out photosynthesis efficiently.	
			[2]

[Total: 6]

				7	
6	Bro	mine, Br ₂ , is a	diatomic mol	ecule.	
	(a)	Explain the n	neaning of 'dia	atomic'.	
					[1]
	(b)	State an adv	erse effect of	bromine.	
					[1]
	(c)	Name the so	lute when bro	mine dissolves in water.	
					[1]
	(d)		ows some ob chemicals X ,	servations made when aqueous solutions Y and Z .	of bromine are mixed
				Table 6.1	
			chemical	observation	
			Х	colourless solution formed	
			Y	colour of solution changes to dark brown	
			Z	no change	
		(i) Suggest	the name of a	a hydrocarbon that is chemical X .	
					[4]

7 A student hangs a mass on an elastic band as shown in Fig. 7.1.

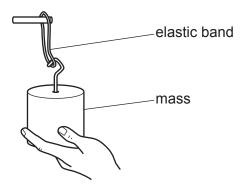

Fig. 7.1

(a) When she releases the mass, the mass moves down.

Energy is transferred between stores.

Complete the sentences:

	(i)	As the mass moves down just after being released, energy is transferred from
		the energy store. [1]
	(ii)	After a few moments, the elastic band starts to stretch and the mass slows down as it falls. When the elastic band is stretching, energy is transferred to
		the energy store
		and also to
		the energy store. [2]
(b)	Ene	ergy is conserved when it is transferred between stores.
	100	J of energy is transferred from the store in (a)(i).
	Det	ermine the total amount of energy gained by the stores in (a)(ii).
		[1]
		[Total: 4]

Draw lines from the box o about the use of bacteria in	t to make three correct statemen	n the left to three boxes on the right to mal n biotechnology.
	there are no ethical concerns about using them.	
	they are not affected by temperature.	
	they are resistant to herbicides.	
Bacteria are often used in biotechnology because		
because	they can make complex chemicals.	
	they do not need any energy.	
	they reproduce very rapidly.	

9			s solutions of lead nitrate and potassium chloride react to produce insoluble lead chlorid and soluble potassium nitrate, KNO_3 .	e,
	(a)	(i)	Balance the chemical equation for this reaction and add the state symbols.	
			$\dots \operatorname{Pb}(\operatorname{NO}_3)_2 (\dots) + \dots \operatorname{KC} l (\dots) \longrightarrow \dots \operatorname{PbC} l_2 (\dots) + \dots \operatorname{KNO}_3 (\dots) $	2]
		(ii)	Complete the sentence to describe the formation of lead chloride in this reaction with word from the list.	а
			displacement neutralisation precipitation redox	
			Lead chloride is formed in a reaction.	1]
	(b)		te which property of lead chloride allows it to be separated from the resulting mixture lation.	ЭУ
			[1]
			[Total:	4]
10	A m	obile	e phone network transmits signals using a frequency of 2100 MHz.	
	(a)	Sta	te the name of the region of the electromagnetic spectrum that is used by mobile phone	S.
			[1]
	(b)	The	mobile phone signals are transmitted through air.	
		(i)	State the approximate speed of electromagnetic radiation in air.	
			[1]
		(ii)	Using your answer to (b)(i) , calculate the wavelength, in metres, of the phone signals.	
			wavelength = m [2]
			[Total:	4]

11 People who have high blood pressure have a blood pressure which is greater than normal for the whole population.

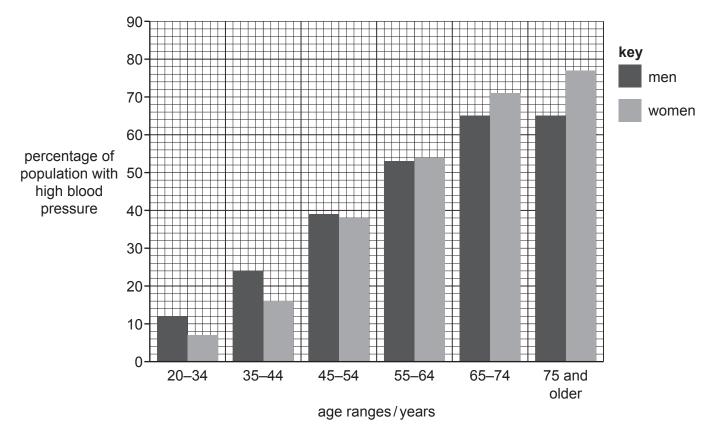

Fig. 11.1

(a) State the percentage of women who have high blood pressure in the age range 35–44 years old.

	% [1]
(b)	Describe two trends shown in the graph in Fig. 11.1.
	trend 1
	trend 2
	[2]
(c)	People who have high blood pressure are more likely to suffer from coronary heart disease.
	State two other risk factors which can increase the risk of a person developing coronary heart disease.
	risk factor 1
	risk factor 2
	[2]

12	Air i	is a n	nixture of gases.
	(a)	(i)	Describe the arrangement of the gas particles in air.
			[1]
		(ii)	State the percentage of nitrogen in clean, dry air.
			[1]
	(b)	Stat	te two substances found in air that are products of the complete combustion of alkanes.
		sub	stance 1
		sub	stance 2
			[2]
	(c)	Ехр	lain why deforestation increases global warming.
			[2]
			[Total: 6]

13	The electrical items	s in a house use	0.6 kW of electrical	power, on average	. everv hour.

(a)	The cost of 1	kilowatt-hour	(kWh) is 8	8 cents.
-----	---------------	---------------	------	--------	----------

Calculate the cost, in cents, of using the electrical items for one day.

cost =		cents	[2]
--------	--	-------	-----

(b) A number of the electrical items are connected to the mains by a single extension lead as shown in Fig. 13.1.

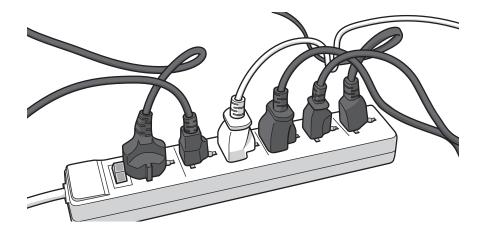

Fig. 13.1

	State and explain the risk of connecting too many appliances to a single extension lead.
	risk
	explanation
	[2]
(c)	State the names of two of the wires in a mains circuit.
	and [1]
	[Total: 5]

14 The boxes on the left contain descriptions of processes connected with the digestion of food.

The boxes on the right contain the names of structures where these processes occur.

Draw **one** straight line from each process to link it to the structure where it occurs.

Each structure can be used once, more than once or not at all.

process	structure
protein digestion in an acid environment	small intestine
egestion	anus
digestion of maltose to glucose	stomach
urea produced	liver
salivary amylase digests starch	mouth
storage of glycogen	rectum
	[6]

15 Table 15.1 shows the electronic configuration of five elements, A, B, C, D and E.

The letters are not the symbols of the elements.

Table 15.1

element	electronic configuration
Α	2
В	2,6
С	2,8,1
D	2,8,6
E	2,8,7

Use the information in Table 15.1 to answer parts (a) to (d).

(a)	State the letters of two elements that are in the same group of the Periodic Table.	
	and	[1]
(b)	State the letter of an element that is a metal.	
		[1]
(c)	Explain why elements C and D are in the same period of the Periodic Table.	
		[1]
(d)	Explain how the electronic configuration of element A shows that it is a noble gas.	
		[1]
	ग	otal: 4]

16 Fig. 16.1 shows a symbol used in food labelling.

The symbol means that the food is exposed to ionising radiation before it is sold.

Fig. 16.1

(a)	State the name	of one type of ionising radi		543
(b)	Explain why so	me food is exposed to ionis		[1]
(c)	Table 16.1 show	ws data for three radioactive	•	[2]
		isotope	half-life	
		caesium-137	30 years	
		polonium-210	140 days	
		technetium-99m	6 hours	
	(i) Explain wh	nat is meant by 'half-life'.		
				[2]
	(ii) Suggest w radiation.	hich isotope in Table 16.1 is	s most useful in a factory	where food is exposed to
				[1]
